## Benefits of using SharePoint Provisioner

## Introduction

- Fast** ➡ SharePoint Provisioner is optimized for fast and efficient import of XML files into the SharePoint platform.
- Automated** ➡ SharePoint Provisioner automates the content conversion process of XML files into SharePoint pages, by processing images, CSS and links between pages. The tool automatically converts metadata and updates the target SharePoint library.
- Flexible** ➡ easy to configure, SharePoint Provisioner helps initially to select the destination in the environment SharePoint target, then in a second step, to select the source files, and in a third step to configure the options of import and finally to run the import.
- Reliable** ➡ SharePoint Provisioner guarantees the integrity of the imported data.

**SharePoint Provisioner™** is complementary to **Notes Extractor™** in your SharePoint migration project.

**SharePoint Provisioner™** is a complementary tool to Notes Extractor. In a application data migration project from Notes to SharePoint, Notes Extractor is used in a first phase to extract the data from the Notes databases and convert it in HTML files. SharePoint Provisioner is used in a second phase to automate the integration of the exported data in the new SharePoint platform.

During the import process SharePoint Provisioner converts the content pages into SharePoint Pages (Custom List Form), maintaining pictures, specific CSS and other page references. A homepage with a hierarchical view of the resulting pages is generated and the metadata is converted and stored as properties of your new pages.

SharePoint Provisioner is a highly optimized process resulting in a High performance import and is available for SharePoint 2013, 2016 & 2019. The tool is also available for importing data into SharePoint Online using either our solution SharePoint Online Provisioner or the partner product ShareGate Desktop.

**Migrate all your HCL Notes applications, QuickPlace / QuickR, Team Room, Forum, Mail, Document Library, etc.**

## Benefits of SharePoint Pages

- ➡ Document libraries are available for free and natively in Microsoft SharePoint Foundation.
- ➡ The pages allow you to automatically apply your corporate theme to your content using the master pages.
- ➡ Users accustomed to working with the Notes Rich Text editor will adapt intuitively to the SharePoint page editor.

## Functional Diagram

Documents security is preserved    Identity mapping is also managed

## User cases

The transition from the **HCL** world to **Microsoft** involves the migration of data and documents. At the time of import the contents of your databases, regardless of type trades, discussion, document library, and others, and they are simple or complex, containing a multitude of attachments or not, is essential to automate the integration, for reasons of cost and time.

**SharePoint Provisioner** supports you in achieving this import step, it has essential technical advantages such as managing data security, the management of different types of fields, taking account of the rich content and matching names users.

Moreover, it is simple to learn, requires no change in your environment whether in Notes databases to import or SharePoint. Developed in the form of PowerShell commands, these are installed in seconds using an installation executable (WSP deployment of a solution), and a configuration wizard allows you to simply execute these commands.

## Features

- Ability to migrate the design of your Notes applications.
- All OLE attachments and objects are integrated into SharePoint libraries.
- The documents in Rich Text Format migrate to a standard SharePoint lists.
- The meta data in Notes documents are also migrated.
- Document security and information about the user's identity is preserved.
- Integration can be made towards a custom list of your choice (existing or not).
- Mapping possibility of data types (fields between Notes and SharePoint).
- Compatible with all SharePoint versions listed below:

### Systems & Configurations

#### Compatible SharePoint versions

- Microsoft SharePoint Foundation 2013
- Microsoft SharePoint Server 2013, 2016 & 2019
- Microsoft SharePoint Online

#### Solution configuration

- Running the installer to deploy the solution on a SharePoint site or subsite.

## Companion Products

**Notes Extractor:** a software solution allowing to export any NOTES application (.nsf) to standard formats like XML/HTML/XSL/EML for archiving or platform migration purposes.

The conversion result may be used on a local desktop with a Web browser or on a Web server. It can also be an intermediate transformation step to be injected into a platform like SharePoint with the COOPERTEAM's SharePoint Provisioner companion product.

**ShareGate Desktop:** whether you use SharePoint or Office 365, or want to migrate to one of those environments, Sharegate is the right tool for you. SharePoint & Office 365 security is complex: with Sharegate you know who has access to what, what's shared externally and easily edit and manage user permissions. You have a complete understanding of Office 365 & SharePoint usage and identify potential security risks. You keep your SharePoint & Office 365 organized and simplify your day-to-day administration.

## About COOPERTEAM

COOPERTEAM is a messaging and collaboration solutions specialist developing, integrating and commercializing software and digital/social collaboration solutions.

Based on technologies from top brand publishers on the market, COOPERTEAM offers a wide range of software and digital collaboration solutions that are feature-rich, flexible and scalable.
