Password Management Issues

Too many passwords

End-users often possess as many as 8-10 passwords for the systems they need to access on a daily basis. Remembering multiple passwords and which one to use for each application becomes a major burden. Consequently, the Help Desk receives a daily stream of calls for password resets, accounting for 30-45% of all Help Desk activity, as end users forget one or more of their passwords. Even worse, end-users jeopardize security by leaving passwords jotted on notes left on or near their computers.

Simplify access to your enterprise without compromising security

Organizations today utilize several platforms and systems to provide their employees, customers and partners with access to the information needed to conduct their job responsibilities. With so many systems in place and the need to securely simplify access to these systems is of the utmost importance.

Disparate password policies

It stands to reason that if there are numerous passwords, each assigned to different systems, the password quality and expiration settings for each are likely to differ. This creates a problem when organizations attempt password synchronization.

Business Case: Too many passwords

Improve end-user experience

Synchronizing the many passwords needed for various platforms and applications streamlines the logon process and expedites access to the enterprise. End-users only have to remember one password instead of several, and make changes to one password in one place.

Reduce burden on Help Desk

Password Power's self-service functionality allows end-user's to securely manage and reset their own passwords reducing calls concerning password reset/recovery. Simplified secure password management allows IT staff to reallocate their time and energy spent on password resets and recovery to other IT projects and security needs.

Increased password security

Password Power's advanced password management functionality—password quality, history, expiration, 3-strikes and last login—secures the password authentication process and enforces corporate best practices for security without Help Desk intervention. It also enables secure access to corporate intranets and extranets. This protects your applications and content from illegal use.

Password management has become a daunting task in many organizations, and one that is more complex with the increase in multi-system and roaming end-user environments. The potential for network security breaches has also increased due to poor password quality. Also on the rise is the need to reduce Help Desk calls by putting password management into the end user's hands with secure self-service functionality.

Organizations seek a solution that will simplify while it secures the password authentication process, facilitating immediate access to the many systems end-users employ during their workday. Moreover, organizations need to recapture the lost productivity, resources and time that result from juggling numerous passwords.

About PistolStar, Inc.

WHO

PistolStar, Inc., an authority in password management and Microsoft Active Directory integration, provides solutions that meet the challenges of securing the global enterprise. PistolStar's products reframe technology issues by creating elegant, simple, and efficient solutions to customers' complex problems.

PistolStar serves customers in a variety of industries, such as pharmaceuticals, finance/banking and energy, focusing on Global 2000 organizations that have corporate mandated security policies and compliance regulations.

WHAT

PistolStar offers benefits to administrators and end-users alike. Our Password Power 8 software reduces help desk calls, provides self-service password resets/recovery, and simplifies the authentication process by leveraging Microsoft Active Directory as your single authentication point creating a single set of credentials to remember and manage.

WHY

PistolStar offers its customers premier services and support with all product purchases by the software's developers, including assistance with product installation and deployment, custom configuration of product functionality, ongoing training, and an online Product Customer Center. PistolStar has a proven track record of success with deployments in over 240 enterprise organizations.

HOW

PistolStar's Password Power 8 software can be purchased directly from PistolStar or through one of our resellers. Our resellers have first hand knowledge of Password Power 8, including installation and deployment. To purchase through a reseller please visit www.pistolstar.com/reseller.html.

The PistolStar Advantage

Password Power 8 (PP8) is a revolutionary and dynamic password management product built on a framework that seamlessly integrates into Windows the capabilities of individual PistolStar Password Plug-Ins. As a result, PP8 is a highly flexible and powerful solution that uniquely provides single sign-on and password synchronization via our hybrid authentication capability, "authentication redirection". PP8 self-service password reset/recovery cascades to all passwords in real-time and automatically updates all passwords each time a password reset occurs, enhancing the security of corporate data. PP8 allows the transition from multiple directory authentication to single directory authentication,

BENEFITS FOR CORPORATE MANAGEMENT

- | | |
|---|--|
| 1 | Enable secure access to corporate intranets and extranets. |
| 2 | Protect applications and content from illegal usage. |
| 3 | Secure the authentication process without increasing Help Desk calls. |
| 4 | Enables IT and end-users to diminish downtime and increase productivity. |
| 5 | 45 day Return-on-Investment |

BENEFITS FOR ADMINISTRATORS

- | | |
|---|--|
| 1 | Unify disparate password policies. |
| 2 | Enable self-service password recovery/reset and reduce Help Desk calls. |
| 3 | Simplify password management by synchronizing passwords from multiple and diverse systems to Active Directory. |
| 4 | Password Power 8 is easy to install and maintain. It does not require end-user involvement to deploy. |
