About us

Cooperteam develops software specializing in corporate messaging and infrastructure management. Cooperteam's mission is improving your productivity and messaging system reliability. Cooperteam's solutions are designed to manage, optimize, and improve IBM Lotus Notes environments.

Cooperteam solutions will optimize your resources by detailed analysis and reporting on messaging environment as well as automating administration tasks to enforce company standards without disrupting productivity. We have over ten years of experience dedicated to these technologies at your service.

Cooperteam currently has a listing of 4 main solutions : **MailFlowAnalyzer™**, **DesktopManager™**, **DesktopManagerProject™** and **InfoNSF™**, and additionally has developed over 20 individual tools all for Lotus Notes.

Our locations

Cooperteam HQ is in France with Offices in Paris, Nice, London (UK), and Boston (USA). We have a large partner network to help reinforce our global presence.

Our name

"Cooperteam" is a representation of the essence of the company: the choice was to incorporate Cooperation with Teamwork.

Cooperation is the practice of co-operating. The association of persons & businesses for common, usually economic, benefit.

Team is defined as, "*People working together in a committed way to achieve a common goal or mission. The work is interdependent and team members share responsibility and hold themselves accountable for attaining the results*".

In essence, Cooperteam seeks to work with you to provide a collaborative, cooperative environment. Our core business is to take existing systems forward using solutions tested time after time to automate successful management and change of your IT architectures.

Our logo

The shape is based on the "**Water Lily**". Historically the name Water Lily and Lotus Flower are used in different ways to describe the same plant. The Water Lily itself is a flowering plant found in fresh water. It's roots anchor in the soil under water and extends the stem to the surface, here the flower grows with it's weight supported by the water. Water lilies range in all sizes from some of the smallest to largest plants found in the world.

This seemed most fitting as the basis of our logo for Cooperteam. If you are familiar with Lotus Notes you should also be familiar with Cooperteam. Our solutions are specifically designed for use with Lotus Notes Messaging infrastructures.

"**Our Roots**" Cooperteam's foundation is expertise in Lotus's architecture. We are Lotus experts and design our products to optimize your environment and resources, as well as to save time and money.

"**Our Stem**" Cooperteam's business practices set us apart and above others. We work in tandem with our clients to understand and meet each of their unique needs. This relationship, with our clients, has allowed us to grow internationally and develop complete and powerful solutions over the last 10 years.

"**Our Flower**" Cooperteam's solutions are the flowers of our business. Their beauty is a blending of powerful features, intelligent design and intuitive user interface. Our products are in use with companies of all sizes, from 50 users to 140,000 users and above.

The choice of our logo with four different shades was chosen to highlight four ideals that we strive for in our daily business practices; Reliability, Vision, Competence and Focus.

Our Clients

Cooperteam's clients range from family owned businesses to Fortune 500 companies and from Governmental and Federal Offices to Universities and Non-Profit Organizations. Today Cooperteam's software and solutions are used in over 300 companies worldwide. Some of these client's have been gracious enough to allow us to mention their names.

What we do

Software:

At Cooperteam, we create innovative software tools and solutions for Lotus Notes and Domino administrators & developers that optimize productivity and industrialize your day-to-day processes.

Cooperteam focuses on delivering software solutions for Domino and J2EE architecture. Our diverse software portfolio includes the leading solutions for corporate messaging management, analysis and reporting.

Reliability and durability are the major qualities of Cooperteam software. Developed mainly in O.S native language, the software uses Notes C API, rather than Lotus Script. The programs are therefore as reliable and efficient as the core of Lotus Notes Domino's programming.

This fact allows our software to treat large volumes of data with the highest level of performance.

Trusted by Fortune 500 companies, especially for large audit and Domino I.S merger schemes, Cooperteam software is used today in more than 300 locations worldwide.

Cooperteam's innovative solutions are complementary with existing IBM products, free from overlap, providing business administrators and developers with a better control of their Domino infrastructure.

Since our software accesses first hand information from the heart of the process, Cooperteam Software provides you with the most complete and accurate information about your Lotus Domino Infrastructure.

Consultancy / Services:

Cooperteam is a leader in offering the best high level consultancy for large corporations. Our team of highly competent consultants together with our innovative solutions have guided and worked with companies of all sizes for a wide range of projects. If you would like assistance or to learn more about our services, please contact us directly. References provided upon request.

No matter your company size or your specific needs, Cooperteam can assist you to get the job done correctly and accurately in the shortest time.
