

Make PowerShell a real solution.

For you and your team.

Automate and delegate many tasks with PowerShell and ScriptRunner.

Especially the ones that keep you from your job.

ScriptRunner is the leading all-in-one solution for PowerShell, for:

Automation

with scripts, monitoring, ITSM, workflows and applications.

Delegation

of recurring routine activities to the service desk and end users.

Control

all activities related to PowerShell and the use of scripts with policies.

Supervision

and control over all processes, clear dashboards and complete reporting.

Centralize

all PowerShell scripts, policies, logs, and reports in one place.

Development

of PowerShell scripts in the team and easy entry with customizable script collections.

SMART. SIMPLE. SECURE.

Scripting should be fun again! Is that your dream? Developing scripts once and issuing them to colleagues, other admin teams or the help desk for joint use and execution.

ScriptRunner[®] makes all that possible. The software supports admin staff, system administrators and DevOps teams in the development, management, execution, monitoring and delegation of daily administration tasks. The simple automation of routine tasks with ScriptRunner[®] leads to more efficiency and higher quality, whether in the private, public or hybrid cloud.

DO YOU HAVE THE CLEAR OVERVIEW?

Systems, applications, and software for Windows are being increasingly administrated with Windows PowerShell only. This brings a lot of great advantages. However, automation and delegation is more than manually implementing and distributing scripts.

AUTOMATION IS WORTH IT.

70% time-saving in recurrent operations speaks for itself. By using ScriptRunner[®], a return on investment will be achieved in less than twelve months.
